

About

“Recover Quicker!” At Endurance Recovery Boots, we understand that the right regeneration methods give you a clear performance advantage. We want to take the regeneration of athletes to the next level and support them in achieving their goals. Our team works continuously to offer Recovery Boots of the highest quality in Australia.

Our Recovery Boots help you to:

- Recover after your hard workout.
- Prevent heavy legs.
- Prevent injury.
- Make your injury periods shorter.

The quality of our products has the highest priority to us. With the constant oversight of our products and a support team, we can guarantee continuous quality, technical support and individual consultation.

In addition to high-quality standards, we attach great importance to comprehensive support for our customers. We want you to be satisfied when you shop with us and that our recovery boots are the right choice for you.

Endurance Recovery Boots Sizing

Have you decided to buy Endurance Recovery Boots? Are you not sure what size you need? We have compiled the most important information and tips so that you can find the right size.

Sizes for Endurance Recovery Boots

The Endurance Recovery Boots are available in three different sizes. To find the best size, we recommend measuring your inside leg length. Selecting a size on the basis of height will be inaccurate.

The sizes we offer:

M: The recovery boots in M are sufficient up to an inside leg length of 81 cm. If your leg circumference is relatively low, you may need to balance it with a higher pressure to get the optimal recovery application.

L: With an inside leg length between 82 cm and 88 cm, rebooting in L is usually best.

XL: For an insideleg length of 89 cm and higher, we recommend the Reboots XL. How many pressure levels do the Endurance Recovery Boots have?

The pressure range of Endurance Recovery Boots is 0-230 mmHG. There are 4 pressure levels, which can be selected by pressing the button during operation.

Are there any side effects from using the Endurance Recovery Boots?

It is recommended to use not more than 3 times a day for 30-60 minutes. Do not exceed the recommended time. There are no side effects, unless you use it more than recommended.

Should I consult my doctor before using the Endurance Recovery Boots?

Endurance Recovery Boots are designed for your personal use and are not intended to replace any health professional care. Please note that if you have any medical condition, it would be best to see your doctor before using recovery boots.
